State Board of Education

The State Board of Education took some important steps in improving the Alaska education system during the 1981-82 fiscal year. The Board, during its 11 meetings in a number of communities across Alaska, addressed a wide range of issues, including:

- bettering classroom instruction through the nationally acclaimed Alaska Effective Schooling Program;
- approving updated criteria for approval of teacher education programs;
- taking steps toward overhauling the Public School Foundation Program;
- helping transfer Bureau of Indian Affairs Schools to the State of Alaska; and
- adopting new sex equity regulations.

The Board also took important action to approve a new policy whereby members of the public can bring complaints before the State Board, and adopted a new policy affirming the Board's commitment to establishing a two-way communications program with fellow Alaskans.

The Board assisted the coordination of the Western Regional Conference of the National Association of State Boards of Education.

At the beginning of FY 82, State Board members were:

Vince Casey, President, Anchorage; Beverly Horn, Vice President, Kodiak; June Nelson, Secretary, Kotzebue; Alaire Stanton, finance officer, Ketchikan; Jan Hohman, Juneau; Jack Townshend, Fairbanks; Thelma Langdon, Anchorage. In March Carol Schatz of Bethel was appointed to replace Beverly Horn, whose five-year term expired.

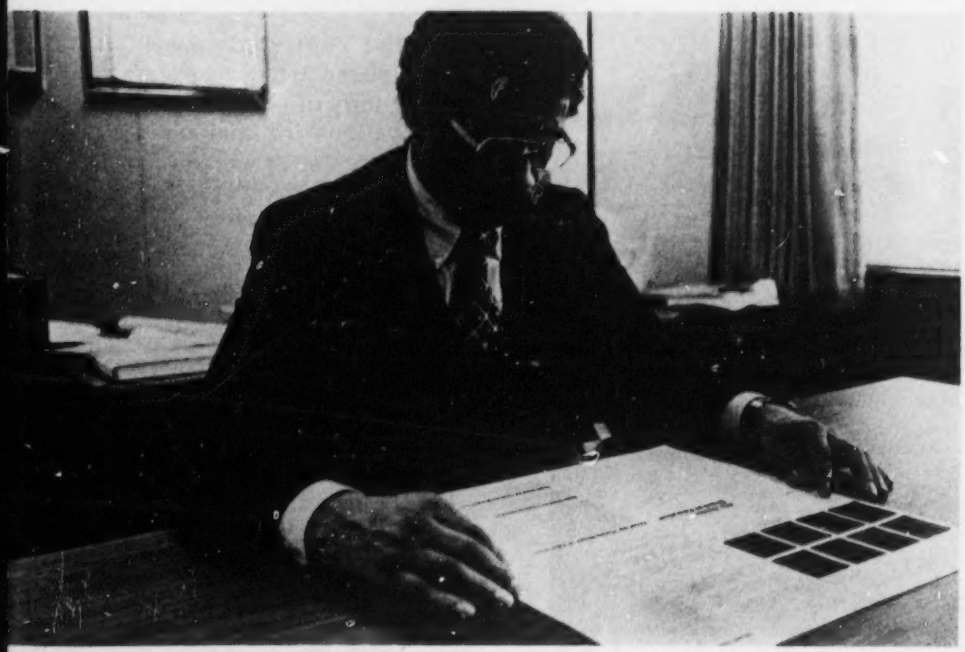
During FY 82, the State Board met on the following dates at the following places:

Aug. 19-20, 1981 – Seward
Sept. 15-16, 1981 – Ketchikan
Oct. 14-15, 1981 – Anchorage
Nov. 9-10, 1981 – Juneau
Dec. 3-4, 1981 – Fairbanks
Jan. 27-29, 1982 – Anchorage
Feb. 17-19, 1982 – Juneau
March 22-23, 1982 – Juneau
April 25-26, 1982 – McGrath
May 20-21, 1982 – Valdez
June 15-16, 1982 – Anchorage

In addition, Col. Alva Hayes of Fort Richardson was military representative to the Board, and Frank Paskvan of Fairbanks' Lathrop High School, was student representative.

The reports on the following pages highlight the activities of the Department of Education, whose direction was set by the State Board of Education.

Vince Casey was president of the Alaska State Board of Education during FY1982.



Division of Education Design

Technology connects 550 public schools scattered across 586,000 square miles

The Division of Education Design and Delivery was created in November 1981 to coordinate four commissions and a number of Department of Education units involved in planning and delivering education services for Alaska's public schools.

The division brings together the Office of Educational Technology and Telecommunications, Planning and Research, Public Information and Publications, Centralized Correspondence Study, the Alaska Council on the Arts, the Alaska Historical Commission, the Alaska Student Activities Association and the Professional Teaching Practices Commission.

The Office of Educational Technology and Telecommunications helped explore and use new technologies for education in Alaska.

Technology in Alaska

To maintain contact with a system of 550 public schools scattered across 586,000 square miles, Alaska has turned to technology. Satellite telecommunications and microcomputer technology are helping to meet the special needs of both rural and urban schools, and the state Department of Education continues to take an active role in exploring and using new technologies.

The department co-hosted the first annual Alaska educational computing conference in April, and Alaska's is one of 43 state education departments involved in the federal government's 21-month Project BEST, a nationwide effort to pool technological information and resources for education.

In FY82 a study was completed exploring the feasibility of videodiscs for educational use, and in FY83 the department will develop use of videotex on the learn/Alaska system.

Telecommunications

FY82 marked completion of the four-year Educational Telecommunications for Alaska (ETA) Project. The systems developed through the project are now an integral part of the educational delivery system in the state.

and Delivery

Used by students and many educators, systems include an electronic mail network connecting the Department of Education, the 53 local school districts, and a number of other education agencies in the state; and the Alaska Knowledge Base, a computerized listing of educational resources.

Audioconferencing is used for meetings, workshops and classes

Individualized Study by Technology (IST), a third component of the project, has established a microcomputer-based method for providing instruction to rural high school students and a set of core courses for ninth and tenth graders.

Telecommunications technology has also enabled the department to join two national communication networks. *Education USA Newsline* provides electronic mail communication with other state education departments, access to national education statistics and research information, and twice daily news coverage of education events throughout the nation. A Project BEST network initiated in FY83 provides electronic mail service and information exchange on technological projects and problems.

learn/Alaska Network

With state lease of a second satellite channel for educational use, the learn/Alaska instructional television and audio-conferencing network began broadcasting to Alaska communities 18 hours a day. The network carried educational and instructional programming to more than 100 sites last school year, and the audioconferencing system brought together small groups of educators and students from all parts of the state for meetings, workshops and class discussions on the air.

Instructional Television

Three major projects were produced for instructional television in FY82. The first half of a series titled *Home in Alaska* depicted the lives of children in three very different Alaska communities. One of the programs, "Agnes of Tununak," received the 1981 Program Excellence Award from Pacific Mountain Network, a regional association of public television stations in western states.

Contracts also were awarded for developing a fisheries education series, an Alaska regional geography series and the last four programs of the *Home in Alaska* series.

Major efforts for FY83 will be to develop several new instructional television products and to help educators use instructional television and audioconferencing as a part of the curriculum.

Microcomputer Technology

Four new courses for Individualized Study by Technology (IST) were developed this past year; and two of the original IST courses were revised to include large print, color, better graphics and decreased hardware requirements. Workshops on the effective use of microcomputers in the classroom attracted more than 700 educators from around the state. A videocassette program was produced to teach Alaska teachers, particularly those located far from service representatives, to troubleshoot problems with Apple microcomputers.

Teachers learn through workshops and videocassettes.

a number one priority

Department staff members also worked with school district personnel in using microcomputers for a[illegible]inistrative purposes; and in spring, the department published for schools a listing of nearly 300 software programs available for statewide use through an agreement negotiated with the Minnesota Educational Computing Consortium.

Effective Schooling

A great deal of planning and research this past year has centered around the Effective Schooling Program. The State Board of Education's adoption of Effective Schooling as a number one priority called for planning of ways to manage and evaluate implementation of the program.

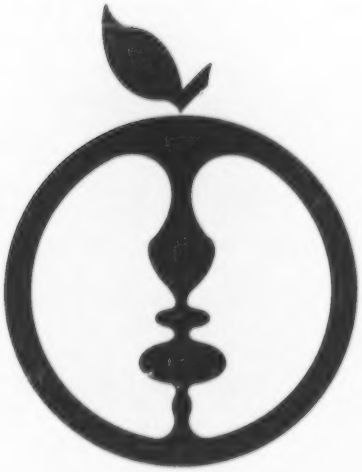
A pilot project to begin training staff of local schools in implementing effective schooling practices was designed by spring 1982, and work on a monitoring and evaluation procedure was well underway. The implementation effort is expected to remain a priority for both the department and the Board at least through FY 1985.

To bring the Effective Schooling Program before the public, the department published the report of the Governor's Task Force on Effective Schooling and summarized its primary findings and recommendations in a four-page tabloid that was distributed in 33 newspapers in the state. Three television

spots announcing the program and soliciting public comment were produced and aired statewide. This communication effort won an Award of

Professional resources for school public relations efforts

Excellence from the National Association of State Education Department Information Officers. Communicating the progress of the program to the public and the education community and gaining public involvement will be an important effort in FY83.



School Finance Study

During FY82 the Legislature appropriated funds to the Department of Education to conduct an in-depth study of Alaska's school finance system. The study is to include: production of indices to reflect population and size variations in cost of providing educational services in Alaska; investigation of alternative approaches to accounting for the cost of educating pupils with special needs; design and construction of a computer simulation model of the school finance system.

A policy group to begin meeting in March 1983 is to formulate final recommendations to present to the State Board and the Legislature in spring 1984.

School Public Relations

For the second year in a row the Department of Education sponsored a School Communications and Public Relations conference for Alaska educators. As a result of department and school district efforts, a statewide school public relations association — the Alaska School Public Relations Association — has been chartered and has begun providing training and professional resources for school public relations efforts.

Correspondence Study

More than a thousand Alaskans were enrolled in Centralized Correspondence Study (CC/S) during the 1981-82 school year. They included 867 students in kindergarten through twelfth grade and 190 adults who studied for GED tests.

The only library in the country to participate wholly by mail.

During FY82 the kindergarten program was rewritten, and an Alaska studies and a biology course were added to the curriculum. A special legislative grant will make it possible to produce six new tenth grade courses next year. They will include health science, earth science, pre-algebra, Western civilization, civics, composition and news-writing. A career education program for grades K through 12 and adult GED students also will be written into the existing curriculum.

The CC/S media center added puppets this year to the books, cassettes and filmstrips available by mail for students and their families. Again this year the center was the only library in the country to participate in the Reading Is Fundamental program entirely by mail. As part of the program, students in grades 7 through 12 selected books which they received by mail free.

Student counseling services were expanded during the year. A computer hookup to the Alaska Career Information System made it possible to answer student queries with up to date information about occupations, programs of study, training and schools, scholarships and sources of financial aid. Career assessment packets were mailed to ninth graders to help them evaluate their interests and aptitudes.

The Centralized Correspondence Study media center added puppets this year to the books, cassettes and filmstrips available by mail.

A new Alaska history text will be pilot tested.

Efforts also were made to develop a student activities program and to increase student participation in activities that would broaden their education. Ten students engaged in on-the-job training through the Rural Student Vocational Program. Five attended state Fine Arts Camps, two observed the state Legislature in Alaska CloseUp sessions and one went to Washington, D.C. for a National CloseUp session. Three students won awards in the World School Childrens Art Exhibition in Korea, one participated in the Anchorage Spelling Bee, and one attended the Alaska Association of Student Governments Leadership Conference.

History and the Arts

The Alaska Historical Commission in early 1981 completed a draft of an Alaska history text first funded by the Legislature in FY78. The text is to be pilot tested in 13 schools in spring 1983, then it will be evaluated on such points as suitability of format and instructional strategies, student and teacher reactions to the materials, and cognitive achievement gains of students who use it.

Again this year schools in many rural districts served as presentation and coordination centers for performing arts tours, arts workshops and Alaskan Shows-to-Go supported by the Alaska State Council on the Arts. In FY82 the State Council provided grants of nearly $150,000 to support short-term artists residencies in the schools. The grants and related management costs were more than matched by participating schools.

Public response against proposed budget cuts convinced the legislature to provide continued support for the arts, and in 1982-83 the state will provide almost $5 million in funding to the State Arts Council. The Council also provides technical assistance on request to school districts involved in providing art works for new schools under percent for art legislation.

Division of Education Progra

Charged with improving the quality of educational programs throughout Alaska, the Division of Education Program Support worked with teachers, school districts, education associations, community members and other citizens toward that end.

. . . Expert training for Alaska's rural, urban and multicultural schools

Staff Development Networking

This year the state legislature provided special funding to help support efforts to develop a statewide staff development network. The efforts took several forms. The Alaska Professional Development Steering Committee, established in March 1980, involved many segments of the state's education profession in helping school districts conduct effective staff development programs, improving the preparation of rural teachers, and coordinating staff development efforts statewide.

Representatives from nearly all school districts met twice during the year to develop ways of building more effective local staff development programs and to identify programs and materials that can be shared throughout the state.

The Alaska State Writing Project, initiated at the request of several school districts in October 1980, involved representatives from 11 school districts this year. Working on the model of San Francisco's successful Bay Area Writing Project, member school districts, the University of Alaska—Fairbanks and the department provided intensive training for teachers from many fields in teaching writing more effectively. Funded for at least two more years, the project is expected by 1984 to have trained at least 150 teachers, who will in turn train other teachers in their own and other school districts.

Fourteen school districts participated this year in the Alaska Content Reading Cadre, a network for providing expert training in teaching students skills that will help them read most effectively in all school subjects. This project, too, is a combined effort of the school districts, the department and various branches of the university. Like the writing project, it is helping to provide

Last year, for FY82, Alaska received $1,170,000 under several titles of the Elementary and Secondary Education Act.

m Support

leaders specially qualified to train teachers and administrators in each of Alaska's varied rural, urban and multicultural situations.

. . . an increase of more than $1 million over last year

Block Grants

Passage of the Education Consolidation and Improvement Act (ECIA) in August 1981 changed the way a number of federally funded programs could be administered. Provisions of ECIA Chapter 1, providing for educational needs of economically disadvantaged students, were virtually unchanged from those under the former ESEA Title I.

ECIA Chapter 2, however, consolidated 29 formerly separate programs into a single block grant entitlement for each state. Like a number of other states with small populations, Alaska will receive a base allocation of $2,187,360 in FY83 – an increase of more than $1 million over similar funds received under individual programs last year.

This year, for FY83, Alaska received $2,187,360 – an increase of $1 million – under the federal block grant that consolidated funds for programs formerly funded separately.

In preparation for administration of the funds, the department helped establish a 13-member state advisory committee, prepared a state plan for distribution of the funds, and set up a monitoring program that will cover all school districts on a three-year cycle.

The block grant program is a federal government attempt to reduce administrative and monitoring requirements for states receiving federal funds. It also provides a percentage of monies for development of statewide leadership programs.

Village Secondary Schools

By the end of FY82 village secondary schools had been provided in all but three of the sites identified in the 1976 Tobeluk consent decree, and projects are underway in those three. In response to that litigation, in which a class action suit was filed on behalf of Native secondary students, more than 100 secondary schools have been constructed in rural Alaska, and 21 other facilities have been remodeled or somehow improved to provide secondary programs. These schools have cost more than $140 million.

More than 100 secondary schools have been constructed in rural Alaska

By fall of FY82 all of the school districts required to submit education plans under 4AAC 05.010–090, the "05 regulations" that grew out of the consent decree, had done so. In all, 22 school districts have undertaken planning and evaluation activities that involved their communities in preparing education programs for grades 9 through 12. The high quality of the resulting plans has affirmed the value of the districts' strong commitment and has resulted in strong instructional programs bolstered by increased cooperation and good feeling between schools and their communities.

School district representatives and new sex equity regulations will help schools encourage students to consider non-traditional alternatives in careers.

Sex Equity

The Department of Education continued working this year to promote sex equity in education for all Alaskans. Department staff conducted and coordinated workshops geared to build a cadre of district representatives to teach other school district staff to recognize sex stereotyping and bias in curriculum materials and other aspects of education.

In June the State Board of Education passed new regulations to help eliminate sex bias in Alaska schools. Prepared by a committee of citizens from all parts of the state, the regulations implement legislation requiring school districts to establish written procedures for reviewing instructional materials and to provide certified personnel and guidance and counseling personnel with training every two years in recognizing sex bias. The regulations also provide for school districts to survey students in grades 5 to 11 to determine their interest in extracurricular activities and to adopt an appropriate activities plan for the following year.

The department also participates on the Equity Coordinating Council for Alaska, an advisory committee of private and public institutions in education.

Vocational Education

In FY82 the Department of Education, in conjunction with the Alaska Vocational Education Planning Council and the Alaska Advisory Council for Vocational

An integrated plan will coordinate federal and state priorities

Education, prepared a five-year plan for vocational education in Alaska. Approved by the State Board of Education in June 1982, the plan includes goals, objectives and activities to be undertaken with federal vocational education funds — funds that will total $1.06 million in FY83.

In addition, at State Board of Education request, the department is preparing an Integrated Plan for Vocational Education that will coordinate these federal priorities and activities with goals, objectives and activities addressing uniquely Alaskan vocational education needs. This plan, too, relies on cooperation with the Vocational Education Planning Council and the Advisory Council for Vocational Education. In its first two phases it has added three objectives to the 18 in the federal plan, coordinating activities with federal funds and those with state foundation funds, which this year totalled approximately $22.3 million.

Special Education

Fiscal year 1982 marked the establishment of an innovative three-year program for serving low incidence handicapped students, particularly in rural Alaska. There are only small numbers of these students, often one or two in a school district. They may be deaf, blind, severely mentally retarded or multiply handicapped; and it is difficult and expensive for school districts to fulfill their special and differing needs.

Beginning in July 1982 a $1.2 million statewide effort will be launched to send appropriate specialists to school districts to help them develop individual education programs, evaluate and expand their resources, and train teachers and aides to work with these special students. Delivered through Alaska Resources for the Moderately/Severely Impaired, a private, non-profit agency, the program is a model way of providing special programs to rural areas.

In a year when many parts of the nation face cuts in federal and state support for special education services, Alaska has increased the state's special education efforts by $25 million, a boost of nearly 100 percent over last year.

Monitoring and Compliance

A major effort in the division's monitoring and compliance activities this year went toward establishing a process for conducting on-site reviews of school district programs. The process applies to comprehensive reviews, which cover school district programs and management and are conducted at school district request. They also apply to compliance reviews of bilingual education, special education and federally funded programs.

Commission on Postseconda

Regulating institutions and helping students

In FY82, its sixth year of operation, the Alaska Commission on Postsecondary Education pursued a number of activities regulating postsecondary institutions in the state and providing assistance to Alaska students seeking education and training beyond twelfth grade.

The Commission's annual survey of Alaska's graduating seniors tallies students' evaluations of their education and their plans for work or study after graduation.

In response to a request from the legislature, the commission in spring 1982 published and distributed a guide to show students which courses from the state's two-year colleges can and cannot be transferred for credit into the state's four-year programs.

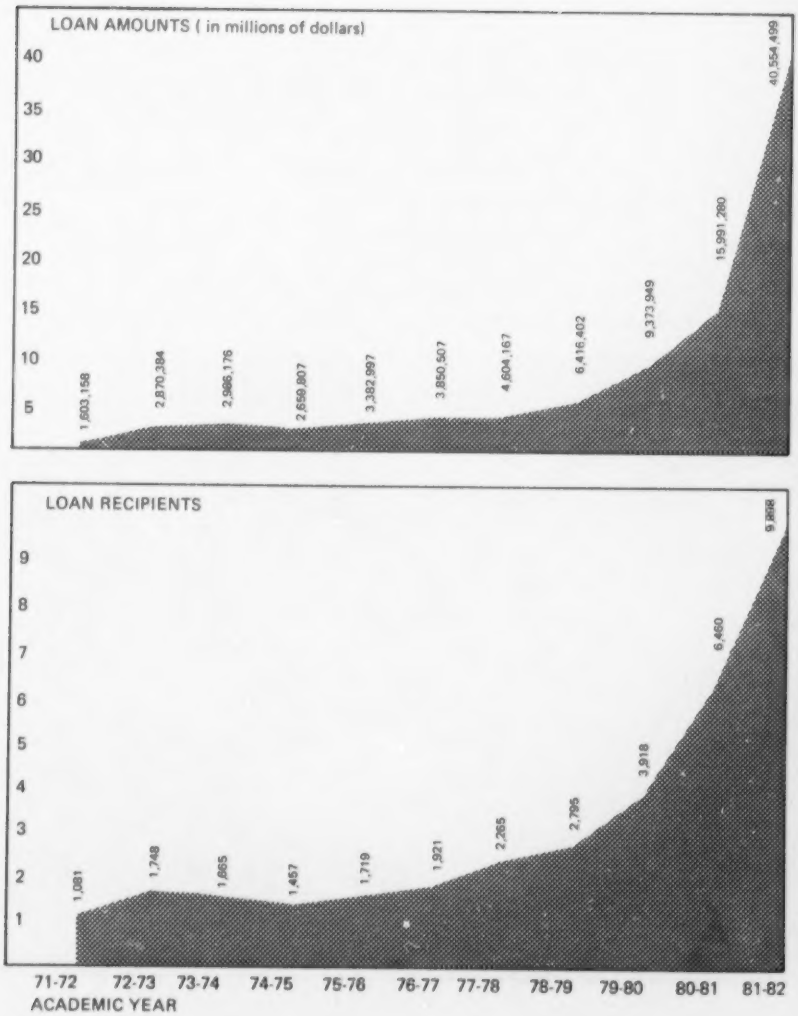
Also at legislative request, the commission completed a study showing cost differences in providing four categories of courses at the state's 10 community colleges.

A study of trends displayed in the commission's annual survey of graduating seniors over the past four years was also completed and was to be published in fall 1982.

In FY83 the commission will devote major efforts to determine whether to recommend formula funding for the state's community colleges and how to solve problems of increasing demands and limited resources in funding the state's student loan program.

ry Education

Alaska's student loan program, administered by the Commission on Postsecondary Education, has grown dramatically in the past ten years.



Division of Management, La

More than $400 million in state Foundation funds . . .

The Division of Management, Law and Finance, along with the Office of the Governor and the State Board of Education, negotiated with the federal government the transferring of Bureau of Indian Affairs Schools to the State of Alaska.

The department, in its negotiations, demanded the federal government transfer the schools in accordance with a four-point plan adopted by the Board. That plan:

1. Each student affected by the closure of the Mt. Edgecumbe boarding high school in Sitka should be assured entry into a comparable secondary program in another school in the state.
2. The BIA should reaffirm its trust responsibility to Alaska Natives by providing an amount of sustained funding equal to Mt. Edgecumbe's FY 1981 operating budget to supplement and enrich the educations of Alaska Natives attending public school.
3. The BIA and the Department of Education should conduct joint hearings throughout the state to get maximum feedback on the transition.
4. The BIA should work with the students, school districts and the Department of Education to guarantee completion of an orderly transfer of primary responsibility of the students no later than the end of the 1981-82 school year.

Word processing and microcomputer installations took advantage of new technology to provide better financial and management services.

w and Finance

Management and Financial Services

As part of providing more efficient budgeting, accounting and management services to all divisions of the department, the Division of Management, Law and Finance spearheaded the installation of 24 Wang word processing stations and nine printers throughout the department this fiscal year. The central processing unit to which these stations are attached can store up to 33,000 pages of text, and the system provides telecommunications connections with agencies in both Alaska and other states.

The division administered more than 400 million dollars in state Foundation funds this year and provided statistical and other services to school districts. A project was developed to help local school districts train their board members in fiscal accountability and management procedures. Another developed a manual that will allow local school districts to audit their own educational programs according to State Board of Education standards.

Food Service and Transportation

The School Food Service program distributed $4 million in federal funds to Alaska schools participating in federal school lunch, breakfast and day care programs. Workshops, inservice training and curriculum materials were also provided at school district request on such topics as nutrition, sanitation and managerial techniques.

The department also funded computerized systems for school bus routing in two urban school districts and a pilot project to survey bus routes in a third school district.

Certification

The division issued more than 3,000 certificates for educators in FY82, and staff members began preparing for installation of a microfilm and on-line computer system for certification records early in FY83.

The State Board of Education adopted new standards developed by the National Association of State Directors of Teacher Education and Certification to be used as criteria for reviewing postsecondary teacher training programs at Alaska's schools of higher education. All university and college teacher training courses in the state must be approved by the State Board of Education. The teacher reviews are headed by personnel from the Division of Management, Law and Finance.

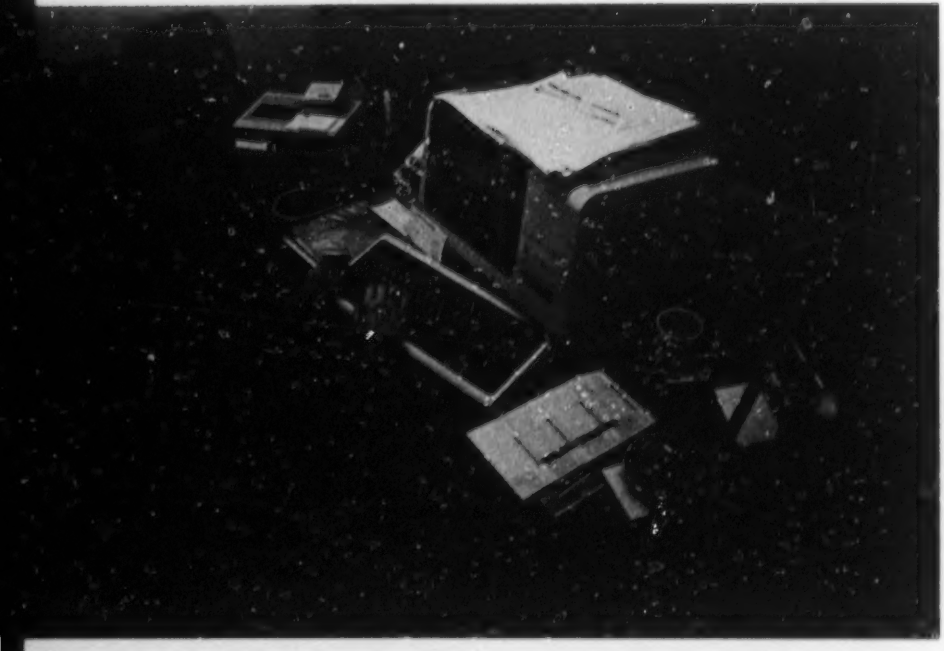
New standards for teacher training programs . . .

Division of Vocational Reha

. . . Helping disabled Alaskans live independently

During fiscal year 1982 the Division of Vocational Rehabilitation continued to coordinate state and federal efforts to help return disabled Alaskans to work. More than 500 of the 3,400 clients who took advantage of the division's services this past year were able to find employment; and it is estimated that they will, over the course of their working lives, return to society about $9.50 for every dollar spent helping them.

Vocational rehabilitation services helped return disabled Alaskans to work.



Independent Living Facilities

In addition, the division funded two facilities that are helping a number of severely disabled Alaskans live more independently. The Independent Options Now (ION) program established four units of barrier free housing in an apartment complex in Anchorage. From these living areas, free of architectural barriers, and with a van and driver provided by the ION program,disabled residents can engage in such activities as grocery shopping, attending social events and advocating for their special needs before governmental agencies. ION residents who need it also are provided with 24-hour attendant care.

bilitation

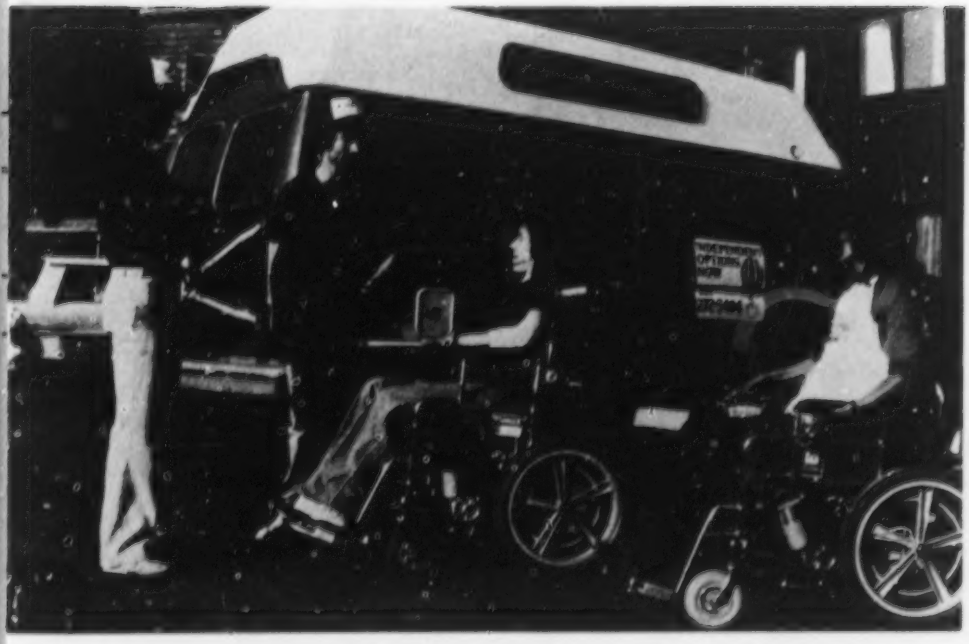
A second facility, the Independent Quality of Living Center (IQLC) in Anchorage, was established to improve information and referral services for severely disabled Alaskans. IQLC has established a statewide computerized information and referral network to respond to requests for information about services from handicapped people in all parts of the state.

Clients return $9.50 for every dollar spent coordinating state and federal efforts.

Evaluations of Vocational Potential

The division's evaluation unit, established in 1977, increased its staff by two members this past year. By completing evaluations of the vocational potential of severely disabled clients more rapidly than had been possible using private contractors, the unit has decreased the time needed to implement rehabilitation plans, increasing the quality and timeliness of services provided to the state's disabled population.

Barrier-free housing and transportation were established in Anchorage through the Independent Options Now (ION) program.



Division of Libraries and Mu

Alaska State Library

A milestone in Alaska library development was reached in FY82 with implementation of the library assistance grant and interlibrary cooperation grant programs. These grant programs were the result of 12 years of planning and the efforts of librarians, citizens and supporters from throughout the state to establish an increased level of state support for library service.

Library assistance grants are available to Alaska public libraries whether they be municipally supported or nonprofit corporations. Basic grants are for $5,000 each, with an additional $5,000 available on a dollar for dollar match with local funds. Grants may be used for library services and operation, including purchase of materials, salaries, and building operations and equipment. Almost 60 public libraries qualified in fiscal year 1982 for grants totaling approximately $550,000.

Libraries also are eligible for interlibrary cooperation grants which allow them to work with one another in projects that reach beyond their primary clientele. Approximately $475,000 in cooperation grants went to such projects as extending regional resource library services; a newspaper index; and a telefacsimile pilot project that allows rapid exchange of journal articles among libraries in Juneau, Anchorage, Fairbanks and Seattle.

Several grants will help expand listings on the computerized Washington Library Network (WLN), the basis of the *Alaska Library Network* catalog, which now lists 350,000 library materials. The additional listings are scheduled to include rare polar and arctic materials at the University of Alaska–Fairbanks and holdings of libraries in Anchorage School District, the first school libraries to be included in the WLN system.

Library materials for isolated villages

The Alaska State Library is making archival prints and safety negatives of more than 5,000 glass and nitrate negatives produced by photographers Winter and Pond, who documented Southeast Alaska history from 1893-1945.

seums

. . . helping school districts plan.

School Library Media Coordinator

A school library media coordinator joined the Anchorage staff of the State Library in January 1982. Before the end of the school year, the coordinator had helped eight school districts with such activities as planning district media centers, establishing policies for selecting materials, and using microcomputers in school libraries. Besides assisting school districts upon request, the coordinator will help update library media standards adopted by the State Board of Education in 1978.

Teleconferencing

Librarians from around the state were able to meet by teleconference over the learn/Alaska network this past year. Besides bimonthly meetings among the interlibrary loan and Washington Library Network advisory groups, teleconferencing led to two statewide question and answer conferences on library automation needs and potential.

In addition a series of librarianship seminars was organized for continuing education in the state. Involving the Alaska Library Association, the E.E. Rasmuson Library and the University of Washington, the sessions drew as many as 87 participants at one point.

Films and Videotapes

A microfiche catalog issued in October 1981 listed state library films and videotapes cataloged since 1977, and a 1982 edition is scheduled to include all film library holdings. In February 1982 the film library began a pilot project to provide half-inch format videotapes as well as the three-quarter-inch tapes previously available through the library. Purchase of more half-inch equipment is planned for FY83 to meet increasing demand from schools.

In June 1982 the State Library issued a request for proposals to produce a statewide media booking system to tie together film libraries throughout Alaska, and work on that project will continue in the coming year.

Interior Villages Project

A joint effort between the State Library and Adult Learning Programs of Alaska initiated a pilot library project in six Interior Alaska villages. Intended to make more library materials available for personal satisfaction and self-directed education, the program provides reading materials to villages unable to support local libraries under other programs. About 180 books have been provided at each site, and plans for FY83 call for increasing these materials by 20 percent, adding audiocassette libraries, and circulating materials among participating villages.

More information than ever before on Alaska's Native cultural heritage

This Haida carved wooden box (c. 1880), now in Übersee-Museum, Bremen, West Germany, is one of hundreds of articles photographed in the European Inventory Project.

Alaska State Museum

During FY82 the Alaska State Museum pursued a wide range of activities to continue preservation and interpretation of Alaska's human and natural history.

European Inventory Project

To expand knowledge and understanding of Alaska's Native cultures, the museum sent four specialists in Native art to survey Alaska ethnographic collections in six major European museums. Project members inventoried holdings documenting the period from 1741 to 1900 that have rarely been seen or studied by Americans. They took more than 1,000 photographs, and the museum published a limited edition catalog on the project.

A second phase of the project is planned to include an inventory of museum collections in Europe, Canada and the United States. Findings will be documented in a microfiche photographic catalog that will include objects from the inventory and from the State Museum's collections. With a computerized cross-indexing system as well, the catalog will provide both scholars and the general public access to more information than ever before on Alaska's Native cultural heritage.

Endowment Heritage Fund Study

Alaska's cultural, historical, and archival resources are an essential part of the state's heritage, yet due to national and international market demands for such materials, museums, historical libraries, and archives experience severe problems in keeping these heritage resources in the state. An Endowment Heritage Fund has been proposed as one means of acquiring and

Dedicated to preserving and interpreting Alaska's Native cultures

preserving these resources. Such a fund would establish a state funded endowment to supplement acquisition funds for museums, historical libraries and archives statewide. To plan the structure, operation and procedures for such a program, the State Museum appointed a statewide task force of museum, library, and archive representatives who analyzed statewide needs and formulated a program to meet them. In summer 1982 the task force will report their findings to the Legislature and recommend a course of action to insure that Alaska's priceless heritage resources are retained in the state.

Native Arts/Cultural Center Planning Project

Plans were begun this year to establish a statewide Native Arts/Cultural Center dedicated specifically to the preservation and interpretation of Alaska's Native cultures. Through special funding by the Legislature, the State Museum coordinated a project to develop a program plan and site selection recommendations for such a center. A committee of more than 15 Native leaders in the arts, education, and cultural programs was appointed to formulate program and preliminary architectural plans. A published report on the project was completed and submitted to the Legislature in May 1982.

Whale Project

During the spring of 1981, two humpback whales grounded in Seymour Canal on Admiralty Island. This event presented an unprecedented opportunity to acquire the complete skeletons of these animals and conduct pioneering field research. As a result, the State Museum has acquired the only two completely documented humpback whale skeletons in any museum in the world. A major exhibition on the humpback whale is planned for the future at the museum.

Other Achievements

An outstanding addition to the museum's collections was the Kiksadi Frog Hat, purchased in cooperation with the Sealaska Heritage Foundation, the Tlingit-Haida Central Council, and the Kiksadi Clan. The museum continued to provide statewide services in education, field services, conservation, and visual arts.

Executive Administration

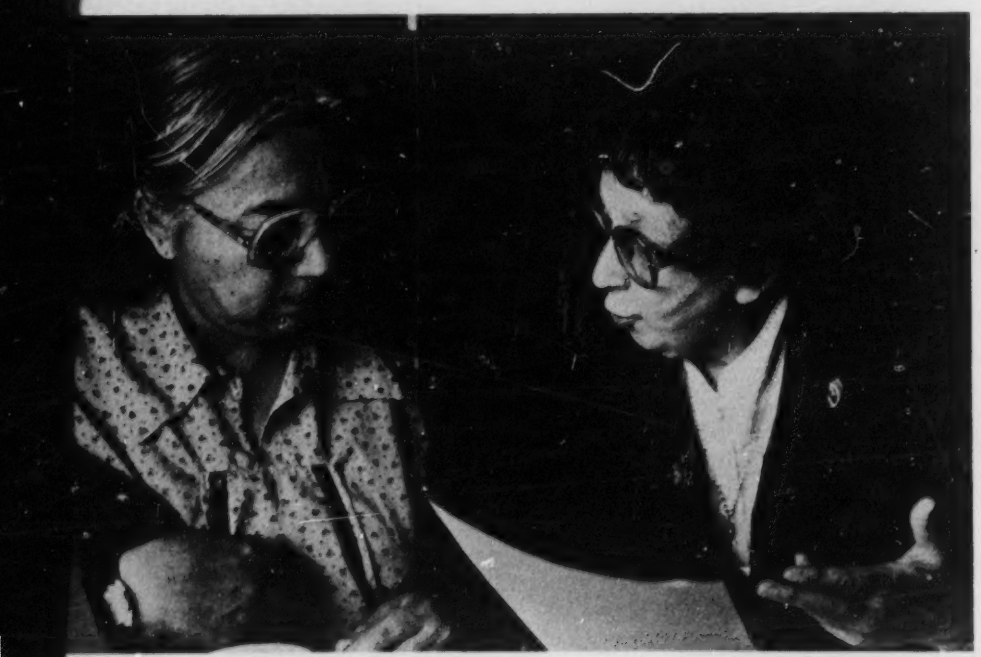
Native Education Study

In early winter Commissioner Marshall Lind appointed eight Native Alaskans to a Commissioner's Study Group on Native Achievement. Charged to advise the department on methods of improving education for Native Alaskans, the group worked with the University of Alaska to complete a study of three successful rural Alaska schools and the elements that have contributed to their educational effectiveness.

The group is studying ways to improve education for Native Alaskans

The group is also examining provisions of the Governor's Task Force Report on Effective Schooling, particularly as it relates to Native education, and looking at teacher certification requirements, early childhood education activities and the state's bilingual programs.

Sister Jeannette La Rose of Galena was named National Adult Education Teacher of the Year.



COPE Plan

The Department of Education took an active role this fiscal year in helping develop a plan to coordinate education programs for adults throughout the state. The Cooperative Operational Plan for Education (COPE plan) was signed in spring 1982 by the University of Alaska Board of Regents, the State Board of Education and the Commission on Postsecondary Education.

The plan calls for establishment of 16 voluntary regional cooperation areas through which agencies such as community colleges, school districts, vocational or technical centers and adult learning centers can work together to share resources and eliminate duplication of services.

Adult and Continuing Education

In FY82 Alaska achieved national recognition in adult education. Sister Jeannette LaRose of Galena was chosen National Adult Education Teacher of the Year, and in May 1983 the state will host the national conference of the Adult Basic Education Commission of the USA and the Northwest Regional Adult Education Association.

With help from legislative increases in funding, adult basic education activities were carried to 70 percent of Alaska's towns and villages.

The Alaska Vocational Technical Center dedicated three new facilities

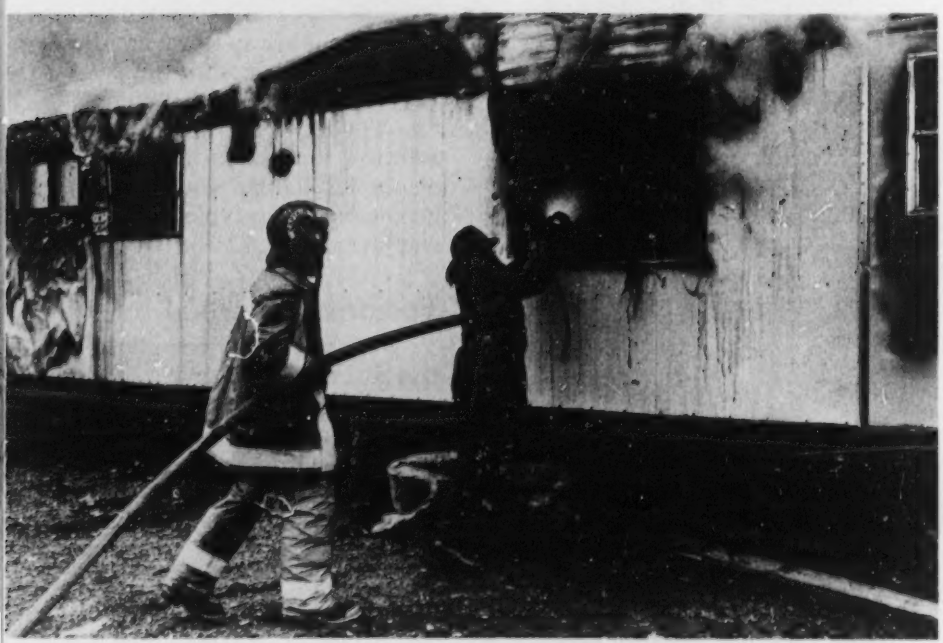
Alaska adults participating in various local programs studied basic literacy, subjects to complete high school graduation requirements, consumer and survival skills, and other topics.

An associate degree in adult education was developed through the University of Alaska Rural Education department, and rural teachers are being encouraged to pursue this avenue of professional development.

To help promote a statewide perspective in community education, the department this year prepared the first composite annual report on community education in Alaska and distributed it to school district superintendents, school board presidents and other groups. The report showed that 116,000 of the state's citizens participated in nearly four million hours of community education activities that ranged from sports to art and academic classes.

In FY82 the department provided direct training for firefighters and instructors through the Anchorage Regional Fire Training Center. Cooperative efforts also were continued with the Department of Public Safety in the Village Public Safety Officer program that was started three years ago. That program is geared to provide rural villages throughout the state with at least one person trained in firefighting, police work, water safety and emergency medical services.

The department helped provide training for fire-fighters and instructors.



Criteria for Excellence

Two task forces of educators and community members developed Criteria for Excellence for evaluating programs in adult basic education and community education. Criteria for adult basic education programs were approved by the State Board of Education in June, and community education criteria were approved in August. Both criteria will be among the 13 distributed to school districts for their own use and to solicit nominations for Promising Practice awards of excellence.

Adult Vocational Education

The Alaska Vocational Technical Center dedicated three new facilities this year – the First Lake Facility, a new marine technology shop building and an oil drilling rig newly enclosed to allow training during winter months. Adding to an established core of courses in more than 15 vocational areas, the Center this year offered on-site programs in maritime licensing and forestry to rural people who could not easily travel to the Center for training.

The Center's roughneck program for oil field workers was featured in the National Alliance of Business Clearing House Showcase as an exemplary program.

Efforts to coordinate programs among industry, community colleges and other agencies continued in fisheries, petroleum, youth employment and tourism.

During FY82, through the Youth Employment Service (YES), 35 students were trained in Anchorage and Fairbanks and 15 in Skagway to act as summer tour guides for the Alaska Railroad and the White Pass Yukon Railroad. In addition, the YES program placed 4,500 other young people in various types of employment.

Personnel Manual

Work was nearly completed this past fiscal year on a procedures manual to guide department staff through personnel activities. Publication of the manual is scheduled for FY83.

The Alaska Vocational Technical Center offered on-site programs for rural Alaskans who could not easily travel to Seward for training.
